

Demo of text highlighting

jneen

October 6, 2021

Hello! Here is some highlighted code:

```
# yo this is ruby

Rouge.highlight('LaTeX') # not real syntax lol

puts "completely \" backslash \"safe" # \\\\\\\\\\\
```

And you can also `puts "your highlighted code"` inline! While this does depend on the unknown lexer "magritte"

flag (and therefore is not usable on platforms like Overleaf where shelling out is not an option), we do generate cache files, so that TeX sources can be distributed without relying on unknown lexer "magritte"

.
See unknown lexer "magritte"
for more info, or run unknown lexer "magritte"
in this repository to make the example.
